

## Constellation Actions

**ARIES** (Si): Infuses a cosmic light, loose, free aspect. Qualitative and not quantitative processes attached to Light and Heat. Crystals, quartz, external skin that gives shape.

**BULL** (N): brings information to incarnate life coming from unbound life. It brings the etheric into the physical (into carbon). It is the movement force in the world.

**TWINS** (S): volcanic forces also linked to water. Linked to putrefaction of salts.

**CANCER** (P): allows Silica formative forces to descend into the living.

**LION** (H): brings Heat, it is fire in the world. It represents the Spirit.

**VIRGIN** (Na, K): alkalis form coverings that then form the colloidal layer in the soil from which humus will develop. They are enveloping Heat that melts.

**SCALE** (Ca): allows humus stabilization, retains the cosmic forces and balances giving solidity. Stimulates quantitative processes.

**SCORPIO** (C): It is the soil's basic structure, the structural skeleton, then world structure.

**SAGITTARIUS** (Mg): It is present in large quantities in the sea.

**CAPRICORN** (Al): makes the soil heavy, governs the colloidal structure as a humus ingredient. It is amphoteric between limestone and silica with pH 7. If it is oriented towards silica, it forms gems, precious stones. Its job is 'the breeder.'

**AQUARIUS (O):** is maximum in the water. It is the basis of Bios forces, from which the soil fertility comes. It allows the being's manifestation. Its job is 'the farmer.' It brings movement in the mineral preparing it for chemical reactions. It is the world's life.

**PISCES (F, Cl, I):** they are not inclined to colloidal status and they form acids (humic acids). They govern the phenomenon of fluorescence (they are linked to inner Light that expands like an aura). Its job is 'the trader.'
