

INDICATIONS FOR THE USAGE OF THE PRODUCTS

Rock dust can be diluted in two ways:

- Place it in the sprayer in this dosage: 1kg/ha (2.2lbs./2.5 acres) and add 200-250 liters (60-65 gallons) of water.
After 30 minutes the product is ready to be sprayed.
- In case you have a problem with nozzles clogging, or in case you have abrasion on the pump bearings, place the dust in a bucket, add 10-15 liters (2.5-4 gallons) of water, stir 2-3 times and after about 30 minutes filter it into the sprayer using the adequate filter.
Then, add the remaining water.

We remind you that the diluted product, if sealed properly, has no expiration date.

The magnesium potassium sulphate can be diluted in two ways:

- Pour it in the sprayer in this dosage: 1 kg/ha (2.2lbs./2.5 acres) to which you add 200-250 liters (60-65 gallons) of water. After about 2 hours, stir and after 6 overall hours the product will be ready to be sprayed. We always recommend filtering the product.
- In case you want to act faster, place 1kg. of product in a bucket, add 3-5 liters (.8-1.4 gallons) of warm water (60 Celsius degrees or 140°F), stir every 10 minutes and after about 2 hours filter it into the sprayer. After this, add the remaining water. If the water is at room temperature it is necessary to stir every 10 minutes, for three hours.

We remind you that the diluted products, if sealed properly, has no expiration date.

WARNINGS: We want to emphasize that for the specific products to have maximum efficacy on plants and soils, they should always be inserted within the whole of the Trinium agricultural method. Also, the products need to be distributed with barrels and pumps that have no residues from treatments with products that are **non-Widdar products**. Therefore, the sprayer needs to be always washed with sodium hydroxide, or you can treat them internally and externally with the corborant W121.
